Acknowledgement

- Our team has put a lot of effort into improving the website, there are shortcomings that hope to sympathize. This project aims at creating an Online Auctioning system which can be used to buy and sell articles. The users of the system can create an Item for sale providing the item name, description, an image of the item, minimum bid prize etc.

Synopsis

- Online Auction is where users can post items they need to sell and buy items they need

- Online auctions also give people the opportunity to learn more about auctioning tems. All information is well organized and included in directories for easy searching and time consuming

- Online Auction also allows users to thoroughly explore or choose items as well as information about each product and thereby make decisions for themselves.

Problem Definition

Having read the project specifications, our team members realize that there are problems and difficulties which may interfere with the users' experience. In order to make the most precise decision and look for the best solution to tackle this, each developer has to consider the following queries thoroughly:

- 1) How many auction products do we need on the web page?
- 2) How many pictures need to be shown?
- 3) What information should be displayed on the homepage?
- 4) How can the users interact with the website?
- 5) How can customers post products to sell?
